Clear Skye IGA: Optimized Identity on ServiceNow

Identity Governance and Security is a Cornerstone of Modern Business

Despite market success, businesses still aren't realizing the true value of identity governance and security. Many enterprises are looking to replace their existing identity governance and administration (IGA) solution.

For a market that has been in existence for nearly 30 years, how could there be so much dissatisfaction with the solutions that are available today? Put simply, most solutions have failed to evolve with the needs of modern business.

Identity has also long been confined to multiple, disconnected best-of-breed solutions. But there's a fundamental shift happening: 50% of enterprise organizations plan to integrate IGA with business and process automation over the next 12-18 months.

Optimizing identity on a business platform enables organizations to simplify operations, increase efficiency, and improve overall user experience, while bolstering security.

Extend Your ServiceNow Investment with Clear Skye IGA

Clear Skye is an identity security solution built on the ServiceNow Platform.

It provides optimized identity governance through access request, access certification, employee lifecycle automation, and business intelligence.

It automatically connects with business processes, integrates external applications, and augments other applications on the ServiceNow Platform, such as HR, GRC, and SecOps.

Clear Skye provides deeper identity control and insights and a bridge between the business and IT.

Clear Skye IGA: Optimized Identity on ServiceNow

Built on the ServiceNow Platform, Clear Skye's unique, platform-first approach empowers organizations to simplify identity security and governance. Here are just a few of the benefits our customers experience:

- Secure identity at the pace of digital transformation

- Deliver unified, organization-wide identity governance on ServiceNow

- Strengthen security by governing access

- Accelerate application onboarding, especially for disconnected systems

- Enhance SecOps, GRC, and HR functions

- Ensure easy, quick adoption and maximize productivity

- Save time and resources on audits

- Pull identity data seamlessly into any workflow

Clear Skye's Capabilities

Start getting the most value from your business platform and identity program with:

Identity Lifecycle Management
Ensure that users can work efficiently with the right policy- and security-driven level of access at the right time without delay.

Access Request
Reduce help desk workload and user frustration by knowing where and how to request access to business applications.

Access Review
Increase the speed and accuracy of attestation — and gain visibility into and control over what levels of access are appropriate for users and groups.

Workflow Management
Support your business functions using the modern low-code/no-code ServiceNow Flow Designer.

New in Clear Skye IGA 5.0

New and enhanced features help you get the most out of your existing investment in ServiceNow:

- Application Access Requests on the Native Service Portal
- Expanded Access Review Types and Actions

- Reusable Request Approval Logic
- Disconnected Systems Support
- JIRA, Google, and Enhanced Exchange Online Connectors
